Location: Noida, Uttar Pradesh

Summary

Full Stack Developer with hands-on experience building responsive web applications using React, Node.js, and Express. Skilled in REST API integration, collaborating with backend teams, and delivering scalable, user-focused solutions.

Experience

Pinnacleway **April 2026 – present**
Full Stack Intern *Noida, India*

- Worked on a Hospital Management System, building responsive and reusable front-end modules using React.js to support patient records, appointments, and staff workflows.
- Worked on the integration of RESTful APIs into the front-end, connecting UI components with backend services for real-time data synchronization.
- Collaborated closely with the backend team to define data contracts, resolve integration issues, and ensure smooth end-to-end data flow.
- Added a Direct Messaging feature within the system, enabling real-time communication between users through a dedicated chat interface.
- Worked on a Report Summary feature, allowing users to view and generate consolidated summaries of key data within the application.
- Participated in Agile ceremonies including sprint planning, code reviews, and issue resolution to maintain consistent delivery.

Technical Skills

Languages: JavaScript,Python, HTML, CSS, Node.js
Frontend: React.js, Tailwind CSS
Backend: Express.js, REST APIs
Databases: MongoDB, SQL
Other: API Integration, Responsive UI Development

Projects

Sanwliya Seth E-commerce Website — Frontend Development & API Integration — Live Website

- Worked on the official e-commerce website of Sanwliya Seth during company tenure, focusing on frontend development and API integration.
- Developed responsive and reusable UI components using React to ensure smooth user experience across devices.
- Integrated backend APIs for product listing, category management, dynamic content rendering, and user interactions.
- Implemented real-time data synchronization protocols utilizing REST APIs, reducing latency by 400ms and improving the responsiveness of the product catalog.
- Collaborated with backend developers to align API contracts, fix integration issues, and improve performance.
- Improved page responsiveness, UI consistency, and component reusability following production-level coding practices.

Book Your Ride — React, Node.js, Express.js, MongoDB, Google Maps API, Tailwind CSS -link

- Built a full-stack ride booking platform with geolocation-based pickup and real-time ride tracking using Google Maps API.
- Designed a secure authentication system supporting role-based access (Rider/Driver), session management, and token validation.
- Implemented RESTful routing for ride booking flow, including ride request creation, driver assignment, trip updates, and ride history.
- Developed responsive UI components using React and Tailwind CSS with modern layouts and reusable component structure.
- Used Socket.io for live ride status updates and trip data synchronization between connected clients.
- Architected backend logic using Express.js with organized controllers, middleware, and services using MVC design pattern.

Certifications

- Core Java Certification — Coding Ninjas
- Frontend Development — Coding Ninjas
- Backend Development with Node.js — Coding Ninjas

Education

Noida Institute of Engineering and Technology
Master of Computer Applications (MCA) — 75% *Greater Noida, Uttar Pradesh (2025)*
